

## بسم الله الرحمن الرحيم

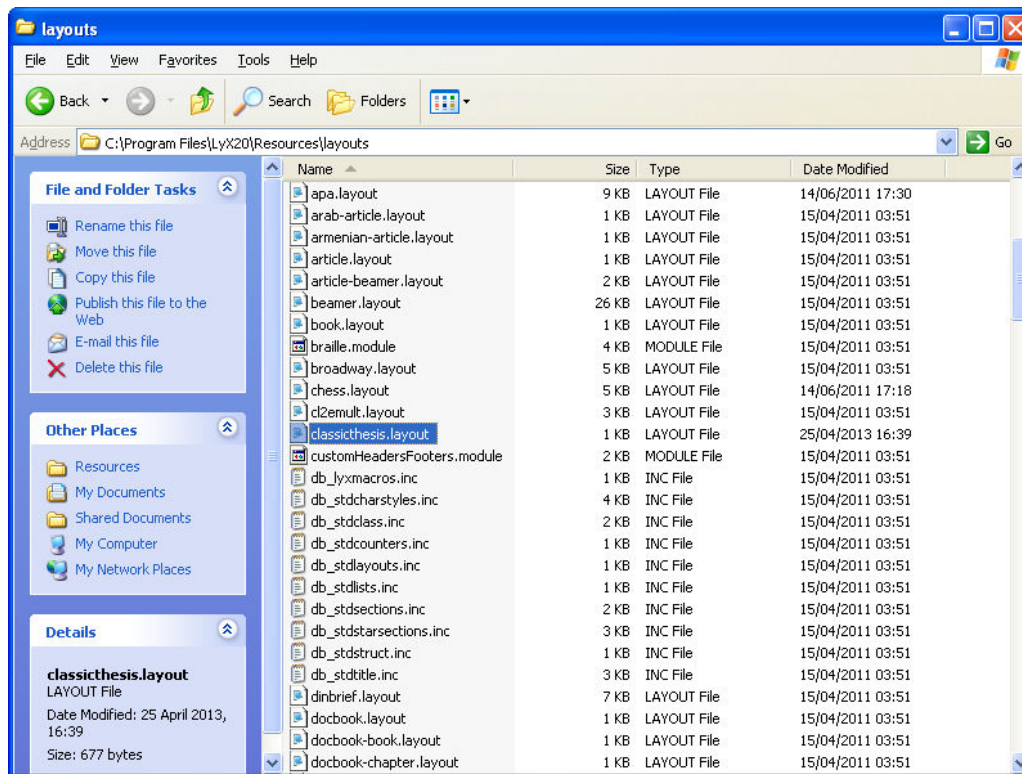

Installing Classic Thesis style file in Lyx 2.0 on Windows XP:

1. Get the files from <https://code.google.com/p/classicthesis/downloads/list>
2. Extract the files to wherever you like.
3. Copy **classicthesis.sty** to:

*C:\Documents and Settings\All Users\Application Data\MiKTeX\2.9\tex\latex\lyx*

4. As classicthesis uses KOMA-SCRIPT class files, you need to update the **scrbook.layout** file to use the **classicthesis.sty** style file:
  - a. Go to: *C:\Program Files\LyX20\Resources\layouts* and open **scrbook.layout** file
  - b. Save it as **classicthesis.layout** in the same folder. Make sure that the extension is LAYOUT not TXT. You may want to change folder options to show the extension of files

- c. In classicthesis.layout, do the following:
  - i. Change the second line:  

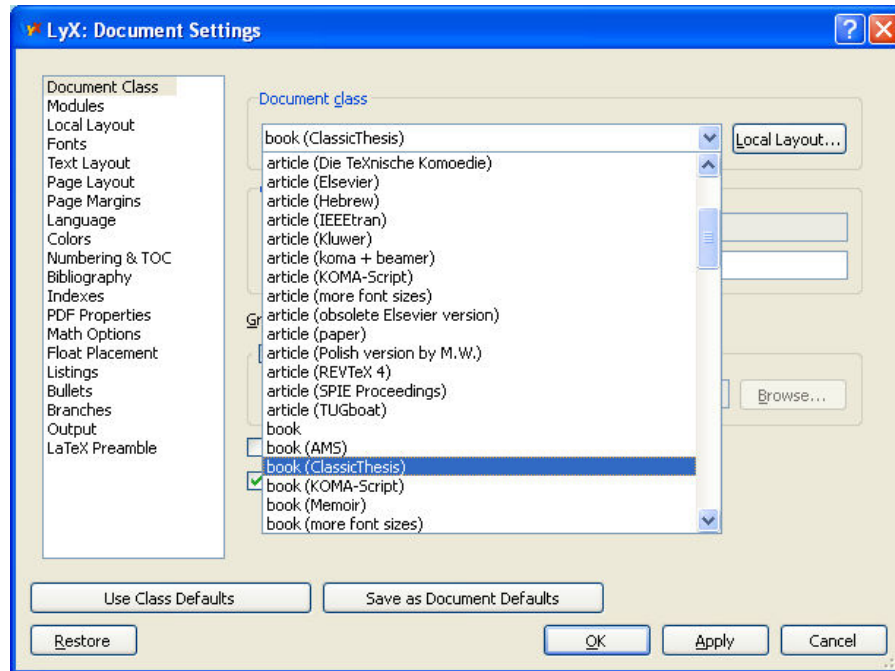

$$\# \backslash \text{DeclareLaTeXClass}\{book (KOMA-Script)\}, \text{ to:}$$

$$\# \backslash \text{DeclareLaTeXClass}[thesis, classicthesis.sty]\{book (ClassicThesis)\}$$
  - ii. Add at the end of the file:  

$$\text{Preamble}$$

$$\backslash \text{usepackage}\{classicthesis\}$$

$$\text{EndPreamble}$$
  - iii. Save file!
5. Go to: *Start/All Programs/MikTeX 2.9/Maintenance (Admin)/Settings (Admin)*
6. Press *Refresh FNDB*
7. In Lyx: *Tools/Reconfigure*
8. Restart Lyx, you should find the style file under *Document Class*

Thanks goes to the following guys:
